

Testing assessment

System summary:

- Create a new receipt, adding items and display the total, and when enter the paid amount show the remaining.
- System should not allow complete the transaction with item had no balance.
- After completing the transaction, the item balance should be deducted from the amount sold.

Use cases (using word)

Create use cases to cover all above scenarios and add extra validation and conditions as needed.

Test Cases (Using Word)

Create test cases cover all above scenarios, you should create positive and negative scenarios to ensure that the system will behave correctly in case of wrong input.

Test Execution plan (using Excel)

Create test execution plan, show the execution sequence, and test case dependency.

And consider maintaining the traceability between the requirement and test cases.

Bug Report (using Word)

Create Bug report include how to reproduce the issue and screen shoots and test data used, and any other information you find will be useful to the development team.

Test Execution result (Using Excel)

Create Test execution report, show the execution result and notes.

Show the requirement development maturity based on the execution result and traceability matrix.

Test execution report (Using PowerPoint)

Create presentation show the testing execution reports dashboard.

Testing Iteration report (Using Word)

Send Email to development manager with all activities done a summarize your findings.
